Source: Kennedy, Joseph C. G. Agriculture of the United States In 1860; Compiled From the Original Census Returns of the Eighth Census, Under the Direction of the Secretary of the Interior, By Joseph C. G. Kennedy, Superintendent of Census. (Washington: Government Printing Office, 1864), 233-234, 247-248.

*Data for soldiers' residency and ownership of slaves is based on the 1860 Population Census and the 1860 Slave Census (See Census Chart), cross referenced with King's Historic Roll (See Muster Roll Chart). In cases of conflicting information, the Muster Roll has been favored.

**James Farris has not been included in these calculations, since he was not locatable on the 1860 population census or on the slave census.

***Samuel Churchill Clark has been included, because his father did own slaves, although the precise number is not known.

Note: Counties where members of the 2nd Missouri Light Artillery resided are tinted.

Mode:	\$0.00	\$0.00	\$0.00

Note: 26 soldiers had real property valued at \$250.00, or less.

This qualifies them as poor whites, according to:

Douglas Hale, *The Third Texas Cavalry In The Civil War*, 33-39. These figures correspond well with those based on Charles E. Brooks' estimations regarding the classification of soldiers, based on their total wealth. (See chart for Total Wealth).

Note: The wealth of soldiers who were the head of their own household was taken from the census. In cases where soldiers were not the head of their household, familial connections with the person listed as head were assumed to have existed under two circumstances: 1) when the soldier and the head of the household shared the same surname, and 2) when the surname of the head of household differed from that of the soldiers, but there were two soldiers/brothers found to be living under that person's roof (this implied that that person may have been an uncle or other relative). In both instances, the real property and personal property possessed by the head of the household were assigned to the soldier(s) for the purpose of statistical calculations of wealth. When two soldiers/brothers shared a single household, the total wealth possessed by the head of the household was divided equally between the sons, for the purpose of statistical calculations. In cases where the census only provided the income of the head of the household, but where familial connections were not apparent, soldiers were assigned values of zero for both personal and real property.

Note: The wealth of soldiers who were the head of their own household was taken from the census. In cases where soldiers were not the head of their household, familial connections with the person listed as head were assumed to have existed under two circumstances: 1) when the soldier and the head of the household shared the same surname, and 2) when the surname of the head of household differed from that of the soldiers, but there were two soldiers/brothers found to be living under that person's roof (this implied that that person may have been an uncle or other relative). In both instances, the real property and personal property possessed by the head of the household were assigned to the soldier(s) for the purpose of statistical calculations of wealth. When two soldiers/brothers shared a single household, the total wealth possessed by the head of the household was divided equally between the sons, for the purpose of statistical calculations. In cases where the census only provided the income of the head of the household, but where familial connections were not apparent, soldiers were assigned values of zero for both personal and real property.
